Cut shapes	Sign fixing channel: Mill finish & Powder coated		

PASSIVE POSTS - FRANGIBLE SAFETY POSTS

The FSP system is a type of sign post which has been designed to benefit road users and help save lives by reducing the fatal consequences of impacts with roadside furniture.

The Frangible Safety Post is highly engineered and constructed from the latest reinforced composite materials that exceeds the strength of steel posts but due to their patented hybrid fibre construction and lower shear strength, is designed to collapse in a safe, controlled and predictable manner. In a collision this dramatically lowers the forces exerted on the vehicle and its occupants, significantly reducing the risk of fatality and severity of injuries.

STEEL POSTS

Our material is grade S275 & conforms to EN 10129. Posts are available with a choice of protective coatings, either Galvanised or powder coated.

WIDE BASED POSTS

A combination of bases and shafts are available within our range of wide based posts. Material is held in a Galvanised condition as standard and can be bitumen rooted or fully painted to suit your requirements.

ALUMINIUM POSTS

A wide range of Aluminium post stock is held with a choice of finishes: either mill finished, anodised or powder coated. Material can be powder coated to any bespoke requirement. These are available in a number of lengths straight from stock, or we can cut to your exact requirements in house.

SERVICES WE OFFER

- Guillotining
- Tube laser cutting
- Cut to length
- Bollhoffing
- Powder coating
- Galvanising

CLIPS & FITTINGS

- Aluminium & Tamtorque / Anti-theft clips
